

A TECHNOLOGICAL BREAKTHROUGH!

INTRODUCING PROVEN
“Controlled Fusion”
(CF) Technology for
Clamp Free Joints

**Controlled Fusion is a better way
to get strong joints. Here's why:**

Forget old-fashioned, time-consuming clamps.

Thicker fitting walls and “Controlled Fusion” technology means stronger joints with less labor.

- **Less Labor** – No clamps are required which greatly reduces labor.
- **Proven Technology** – Used world wide for over 20 years in thousands of demanding pressure applications.
- **Stronger Joints** – Patented “Controlled Fusion” technology, coupled with thicker couplings, provides the strongest joints in the industry.
- **Maximum Flexibility** – Our new CF system uses the same fittings as our popular “No-Hub” system.
